Test Summary Report

(Demo Web Shop Application)

Created By: Shubham Yetonde

Product Name	Demo Web Shop Application
Product Description	The **Demo Web Shop** is a mock e-commerce platform designed for testing and demonstration purposes. It offers a range of product listings, from electronics to clothing, allowing users to explore typical e-commerce functionalities such as product search, filtering, shopping cart management, and secure payment processing. The platform serves as an ideal testing environment for developers and quality assurance teams to simulate real-world user interactions and identify potential bugs or performance issues before launching a live e-commerce site. With an intuitive design and easy-to-navigate interface, the Demo Web Shop showcases various features like product display options, price filtering, user account management, and checkout processes, all aimed at providing a seamless shopping experience for users.
Project Description	**<Mission of Project>** ● Conducted testing to verify the Quality of the website **<Project Output>** ● Test Summary Report & Evaluation ● Bug/Defect Report
